SUMMARY

Motivated and disciplined professional transitioning from a successful background in retail and team management to a career in software development. Completed core coursework in Web Development through CareerFoundry and currently in the final specialization phase, building advanced skills in Python and hands-on experience with Agile development methodologies, including sprint planning, stand-ups, and iterative development. Strong foundation in project coordination, team leadership, and problem-solving, now applied toward building efficient, user-focused software solutions. Eager to bring a strong work ethic and attention to detail to a junior developer role.
